GIRP membership offers a wide range of benefits. Your representatives can participate in GIRP’s project committees and contribute to the working groups such as the patient adherence, e/mHealth and home care project groups. They can also participate in the Advisory Council Supply Chain Solutions. This will extend your healthcare policy network and provide insights into new partnership opportunities, helping cement your company into the pharmaceutical value chain.

Being a member of GIRP also provides access to influential forums, debating and discussing public policy developments and best practices in the sector. We bring together manufacturers and distributors with shared interests and common understanding, helping improve the business environment for all.

INDUSTRY SERVICES
Pharmaceutical full-line wholesalers have expanded from the full product range to a full service range. We offer a diverse portfolio of high-value services for manufacturers, pharmacists and other healthcare professionals that bring benefits to patients:

- Pre-wholesaling, using state-of-the-art logistics and storage: Pharmaceutical pre-wholesalers act as logistics and service partners for the manufacturers. We provide highly specialised bulk deliveries of pharmaceutical, healthcare and consumer products to wholesalers, hospitals and community pharmacies.

- Unique sales data insights: Our members can provide expert insight into market dynamics and data. This includes online access to product data and sales reports in real time, quick and efficient market information, information about potential shortages, etc.

- Product track and trace: GIRP members have the capability to perform order Track & Trace services for specific products (by order, by delivery, live on vehicles), stock status management whilst providing complete visibility of inventory.

- Marketing services: There are many services wholesalers can perform in order to improve your marketing. These include market research, product pre-launch services, producing and delivering consumer-driven brand plans for maximum impact.

- Sales services: Our members can support manufacturers, providing sales resources and multilingual personnel.

PATIENT SERVICES
GIRP members are improving healthcare delivery through pharmacies making life simpler for patients. Initiatives include:

- Adherence and persistence: Many patients do not realise the full benefits of adhering to their medications. Wholesalers, working in close cooperation with other supply chain partners such as pharmacies, general practitioners, insurers, caregivers can improve the effectiveness of treatments. By collecting, analysing and filtering information, this lowers healthcare costs, increases patient empowerment and prevents incorrect use of medication.

- Patient medication reminders (eHealth, mHealth): Taking medication on time and at the right dose improves adherence. Our members can send reminders to patients by email, SMS or via healthcare apps for smartphones and tablets.

- Monitoring: Our members help monitor patients’ adherence to treatment, providing insights that can improve both treatment plans and medicines use.

- Disease-specific medication management: Serious chronic conditions, such as diabetes, asthma/COPD and neurodegenerative diseases, require careful management. Poor adherence can cause problems and even escalations leading to hospital admission. Our disease management services can help maximise the efficacy and effectiveness of treatments.

- Homecare services: Our members can provide home and community-based care for patients. These include tailored chronic disease management programmes. If required, trained staff can provide home administration of products. They can also teach patients how to self-administer their therapies.
